

Ford Motor Company

NYSE: F | Dearborn, Michigan

Fiscal Year Ended December 31, 2025 (with Q1 2026 update)

Prepared July 1, 2026

Company Background

Ford Motor Company makes and sells trucks, SUVs, commercial vans, and cars under the Ford and Lincoln brands. The company was founded in 1903 by Henry Ford and is headquartered in Dearborn, Michigan. Ford is a publicly traded company and trades under the ticker “F” on the NYSE. As of 2026, the market cap is around 55-56 billion, \$13- \$14 per share.

There are 4 main segments where Ford operates.

1. Ford Blue
 - Traditional gas and hybrid vehicles
 - Generated \$101 billion in revenue in 2025
 - 55% of total company revenue
2. Ford Model E
 - Electric vehicles
 - Generated \$6.7 billion in revenue in 2025
 - 2% of total company revenue
3. Ford pro
 - Commercial vehicle business focuses on commercial, government, and rental customers. Offering software and car services for businesses.
 - Generated \$66.3 billion
 - 36% of total company revenue
4. Ford credit
 - Focuses on financing and leasing the vehicles alongside wholesale loans to retail customers and dealership networks
 - Generated \$13.3 billion
 - 7% of total revenue

2025 revenue by segment

Ford's key products and services include pickup trucks, Transit vans, Bronco and Explorer SUVs, and electric vehicles. The Lincoln brand is their luxury line. Their main revenue driver is the F-Series pickup trucks, while electric vehicles, which are their newest product line, have been the poorest performers. The Ford brand alone generates about 90% of total revenue between the two brands.

Revenue By Geography

2025 Revenue by geography

We can see from the chart that their main consumer segment is based in the USA with 67.5%, Canada with 7.8%, the UK with 6.6%, and Mexico with 1.3%. All other countries combined make up 18.9%. This means that their main revenue stream comes from US consumers, because Ford as a brand is popular in the USA and their commercial business that helps US businesses plays a key role in this.

Key competitors

- General Motors (commercial vehicles)
- Tesla (EV side)
- Toyota
- Honda
- Rivian
- BYD (competitor in EV's outside of the USA)

Key News

- In 2024, the company changed its EV strategy and cancelled three EVs that they had planned. The Model e asset impairment and EV program cancellation in 2025 resulted in a \$10.7 billion loss. The all-electric three-row SUV program cancellation and resulting actions led to a \$1.2 billion loss in 2024 and a \$1.2 billion loss in 2025
- Ford launched new Expeditions and Navigators in North America and the electric Puma in Europe
- Ford and Ford Credit currently hold BBB- investment-grade ratings, but there's a risk of being downgraded because of tariff pressures and big EV losses
- Tariffs impacted Ford in 2025, although they received a tariff-related refund of \$1.3 billion. Tariffs also affected their supply chain and the cars that the company was manufacturing abroad

Economic factors

- Interest rates
 - ❖ Most people finance their cars, when rates go up, the demand for cars goes down
- Gas prices
 - ❖ Ford's main product is traditional internal combustion engine vehicles, which decreases the demand for their product
- Government policies and Tariffs
 - ❖ The government policies on emission standards and EV tax credits drive demand up
 - ❖ The government tariffs increase the price on vehicles, which drives demand down.

Financial Analysis

Ford's consolidated financial statements are audited by PricewaterhouseCoopers LLP, which also serves as auditor for Ford Motor Credit Company LLC.

Income Statement

Ford Motor Company Income Statement						
	2024	2025		YTD 5/5/2025	YTD 4/29/2026	LTM 4/29/2026
Revenue	184,992	187,267		40,659	43,253	189,861

EBITDA Adjustments	(96)	13,723		110	226	13,839
Adjusted EBITDA	10,239	10,642		2,865	5,368	10,758

FY 2024 vs FY 2025:

- **Adjusted EBITDA:** Ford generated Adjusted EBITDA of \$10,239 million in FY 2024 and \$10,642 million in FY 2025, representing margins of 5.5% and 5.7%, respectively.
 - **Revenue Growth:** Revenue grew from \$184,992 million in FY 2024 to \$187,267 million in FY 2025, representing approximately 1.2% year-over-year growth.
 - **Gross Margins:** Gross profit declined from \$26,558 million in FY 2024 to \$12,801 million in FY 2025, with gross margin falling from 14.4% to 6.8%. The primary reason for this decline was a \$9.4 billion non-cash impairment charge related to Model e asset impairments and EV program cancellations.
 - **Operating Expenses:** SG&A increased from \$10,287 million in FY 2024 to \$10,849 million in FY 2025. Ford Credit interest, operating, and other expenses increased from \$11,052 million to \$11,121 million.

Year to date 03/31/2025 vs Year to date 03/31/2026:

- **Adjusted EBITDA:** Ford generated Adjusted EBITDA of \$2,865 million in Q1 2025 and \$5,368 million in Q1 2026, representing margins of 7.0% and 12.4%, respectively. The improvement was driven by a \$1.3 billion one-time tariff benefit.
 - **Revenue Growth:** Revenue grew from \$40,659 million in Q1 2025 to \$43,253 million in Q1 2026, representing approximately 6.4% year-over-year growth.
 - **Gross Margins:** Gross profit increased from \$5,471 million in Q1 2025 to \$7,942 million in Q1 2026, with gross margin improving from 13.5% to 18.4%. The \$1.3 billion tariff benefit primarily drove this improvement.
 - **Operating Expenses:** SG&A increased from \$2,431 million in Q1 2025 to \$2,807 million in Q1 2026. Ford Credit interest, operating, and other expenses increased from \$2,721 million to \$2,806 million.

Adjusted EBITDA Bridge

Adjusted EBITDA Bridge		
	2024	2025
Net Income	5,894.0	(8,162.0)
Interest Expense, Net	1,115.0	1,254.0
Taxes	1,339.0	(3,668.0)
D&A	<u>7,567.0</u>	<u>7,834.0</u>
EBITDA	15,915.0	(2,742.0)
EV asset impairment/program cancellation asset write-downs	-	9,435.0
pension and OPEB expense/income	149.0	1,062.0
Equity method investment (earnings)/losses and impairments in excess of dividends received	(287.0)	3,572.0
net realized and unrealized (gains)/losses on investment	42.0	(346.0)
Adjusted EBITDA	15,819.0	10,981.0

- **EV asset impairment/program cancellation asset write-downs**
 - (\$9,435M in 2025)
 - Cancelling three EVs and ending the current F-150 Lightning production
- **Pension and OPEB expense/income (\$1,062M in 2025, \$149M in 2024)**
 - Not part of Ford's day-to-day operations
- **Equity method investment (earnings)/losses (\$287M gain in 2024, \$3.6B loss in 2025)**
 - In 2025, it was mostly the \$3.2B write-down of their battery joint venture.
- **Net realized and unrealized (gains)/losses on investments (\$42M loss in 2024, \$346M gain in 2025)**

- Not part of Ford's day-to-day operations

Adjusted EBITDA Bridge (2025Q 1 - 2026 Q2)		
	2025 Q1	2026 Q1
Net Income	471.0	2,548.0
Interest Expense, Net	288.0	350.0
Taxes	148.0	361.0
D&A	<u>1,848.0</u>	<u>1,883.0</u>
EBITDA	2,755.0	5,142.0
Special items (pre-tax)	110.0	226.0
Adjusted EBITDA	2,865.0	5,368.0

- **Special Item (pre-tax)**
 - Changes from EV program cancellation

Balance Sheet

Ford Trailing Balance Sheet Metrics		
	2024	2025
Short Term Debt	54,949	57,302
Long Term Debt	105,329	111,584
Short Term Leases	-	-
Long Term Leases	-	-
Total Debt	160,278	168,886
<i>Debt to Adj. EBITDA</i>	<i>10.1x</i>	<i>15.4x</i>
Cash	22,935	23,346
Net Debt	137,343	145,540
<i>Net Debt to Adj. EBITDA</i>	<i>8.7x</i>	<i>13.3x</i>
Shareholder Equity	44,835	35,952
Intangible Assets	667	553
Tangible Equity	44,168	35,399
<i>Total Debt to Tangible Equity</i>	<i>3.6x</i>	<i>4.8x</i>
Cash	22,935	23,346
Revolver Availability	25,200	24,600
Total Liquidity	48,135	47,946
AR Days	29.0	30.0
AP Days	55.6	54.0
Inventory Days	34.4	32.0
Cash Conversion Cycle	7.9	8.0

AR	14,723	15,398
AP	24,128	25,809
Inventory	14,951	15,285

FY 2024 vs FY 2025:

- **Cash Conversion Cycle:** The cash conversion cycle remained relatively stable, increasing slightly from 7.9 days in 2024 to 8.0 days in 2025. This means Ford is still converting its inventory into cash pretty efficiently.
 - **AR Days:** AR days increased slightly from 29.0 days in 2024 to 30.0 days in 2025. Customers are taking about 1 more day to pay Ford.
 - **AP Days:** AP days decreased from 55.6 days in 2024 to 54.0 days in 2025. Ford is paying its suppliers about 1.6 days earlier than before. 1.6 days is not a significant change, but from a lender's perspective, it's still a negative change.
 - **Inventory Days:** Inventory days improved from 34.4 days in 2024 to 32.0 days in 2025. Ford is holding less inventory relative to their sales, which is a good sign.
- **Total Liquidity:** Total liquidity decreased slightly from \$48.1 billion in 2024 to \$47.9 billion in 2025. This small drop is mainly from using some cash and revolver capacity to fund operations.
- **Total Debt:** Total debt increased from \$160.3 billion in 2024 to \$168.9 billion in 2025. This increase was driven by higher debt at Ford Credit as they financed more receivables and leases.
- **Net Debt:** Net debt increased from \$137.3 billion in 2024 to \$145.5 billion in 2025. This is because total debt went up while cash stayed roughly flat.
- **Debt to EBITDA:** This ratio got a lot worse, jumping from 10.1x in 2024 to 15.4x in 2025. The big increase is because EBITDA dropped significantly due to the \$9.4 billion EV impairment charge, while debt went up at the same time.
- **Tangible Equity:** Tangible equity dropped from \$44.2 billion in 2024 to \$35.4 billion in 2025. This decline was driven by the \$8.2 billion net loss in 2025 and dividend payments.
- **Total debt to tangible equity:** This ratio increased from 3.6x in 2024 to 4.8x in 2025. The increase is because total debt went up while tangible equity went down, making the company more leveraged.

Year to date 03/31/2025 vs Year to date 03/31/2026:

Ford Trailing Balance Sheet Metrics		
	2025 Q1	2026 Q1
Short Term Debt	57,302	50,791
Long Term Debt	106,034	106,335
Short Term Leases	-	-
Long Term Leases	-	-
Total Debt	163,336	157,126
<i>Debt to Adj. EBITDA</i>	<i>57.0x</i>	<i>29.3x</i>
Cash	23,356	17,649
<i>Net Debt</i>	139,980	139,477
<i>Net Debt to Adj. EBITDA</i>	<i>48.9x</i>	<i>26.0x</i>
Shareholder Equity	44,835	35,952
Intangible Assets	667	553
Tangible Equity	44,168	35,399
<i>Total Debt to Tangible Equity</i>	<i>3.7x</i>	<i>4.4x</i>
Cash	23,356	17,649
Revolver Availability	25,200	24,600
Total Liquidity	48,556	42,249
AR Days	34.1	35.8
AP Days	57.1	54.2
Inventory Days	<u>33.8</u>	<u>34.4</u>
Cash Conversion Cycle	10.8	16.1

AR	15,398	17,227
AP	25,809	26,039
Inventory	15,285	16,537

- **Cash Conversion Cycle:** The cash conversion cycle increased from 10.8 days in Q1 2025 to 16.1 days in Q1 2026. Ford is taking 5.3 days longer to convert inventory into cash.
 - **AR Days:** AR days increased slightly from 34.1 days in Q1 2025 to 35.8 days in Q1 2026. Customers are taking 1.7 days longer to pay their bills.
 - **AP Days:** AP days decreased from 57.1 days in Q1 2025 to 54.2 days in Q1 2026. Ford is paying suppliers 3 days faster, which is a negative sign from lenders' perspective since the business will hold less cash.
 - **Inventory Days:** Inventory days increased from 33.8 days in Q1 2025 to 34.4 days in Q1 2026. Ford is holding slightly more inventory relative to sales.
- **Total Liquidity:** Total liquidity dropped from \$48.6 billion in Q1 2025 to \$42.2 billion in Q1 2026. This is a pretty big decrease of about \$6.3 billion, mainly because Ford used cash to pay off their convertible notes and fund operations.
- **Total Debt:** Total debt decreased from \$163.3 billion in Q1 2025 to \$157.1 billion in Q1 2026. Ford paid down about \$6.2 billion in debt, including repaying their convertible notes without refinancing them.
- **Net Debt:** Net debt decreased slightly from \$140.0 billion in Q1 2025 to \$139.5 billion in Q1 2026. Total debt went down but so did cash, so net debt stayed about the same.
- **Debt to EBITDA:** This ratio improved significantly from 57.0x in Q1 2025 to 29.3x in Q1 2026. The improvement is because Adjusted EBITDA more than doubled due to the \$1.3 billion IEEPA tariff benefit and strong operating performance, while total debt actually decreased.
- **Tangible Equity:** Tangible equity dropped from \$44.2 billion in 2024 to \$35.4 billion in 2025.
- **Total debt to tangible equity:** This ratio increased from 3.7x in Q1 2025 to 4.4x in Q1 2026. The increase is because tangible equity went down significantly while debt didn't fall as much, making the company more leveraged.
- Also, there was a \$5.7 billion change in cash from \$23.4 billion to \$17.6 billion, caused by the repayment of convertible notes.

Cash Flow Statement

	2024	2025
Cash from Operations	\$ 15,423.00	\$ 21,282.00
Cash from Investing	\$ (24,370.00)	\$ (18,049.00)
Cash from Financing	\$ 7,485.00	\$ (3,205.00)

FY 2024 vs FY 2025

- **CFO:** Cash from operations increased from \$15.4 billion in 2024 to \$21.3 billion in 2025. This improvement was primarily driven by favorable working capital changes, including lower finance receivables and higher accounts payable.
- **CFI:** Cash from investing improved from negative \$24.4 billion in 2024 to negative \$18.0 billion in 2025. This means Ford used less cash for investing activities, mainly because capital spending remained relatively flat while collections of finance receivables increased.
- **CFF:** Cash from financing decreased from positive \$7.5 billion in 2024 to negative \$3.2 billion in 2025. This big swing was driven by lower debt issuances and higher debt repayments, as Ford paid down debt rather than borrowing more.

		2025 Q1	2026 Q1
Cash from Operations	\$	3,679.00	\$ 1,316.00
Cash from Investing	\$	210.00	\$ (771.00)
Cash from Financing	\$	(6,120.00)	\$ (6,172.00)

YTD 03/31/2025 vs YTD 03/31/2026

- **CFO:** Cash from operations decreased from \$3.7 billion in Q1 2025 to \$1.3 billion in Q1 2026. This decline was driven by unfavorable working capital changes, including a decrease in accounts payable and higher accounts receivable
- **CFI:** Cash from investing decreased from positive \$210 million in Q1 2025 to negative \$771 million in Q1 2026. This swing was driven by higher capital spending of \$2.4 billion and lower returns of capital from equity investments.
- **CFF:** Cash from financing remained fairly stable, going from negative \$6.1 billion in Q1 2025 to negative \$6.2 billion in Q1 2026. Ford continued to pay short-term debt and make fewer dividend payments.

Debt Service Coverage

Company X Debt Service Coverage			
		2024	2025
Adjusted EBITDA		15,819	10,981
Maintenance Capex		(8,684)	(8,815)
Cash Taxes		(1,339)	3,668
Cash Flow to Service Debt		5,796	5,834
Required Principal Amort		-	
Interest Expense		1,115	1,254
Fixed Charge Coverage		5.2x	4.7x

The fixed charge coverage ratio decreased from 5.2x in 2024 to 4.7x in 2025. This means Ford had less cash flow available to cover its debt service obligations in 2025 compared to 2024.

The decrease was driven by Adjusted EBITDA dropping from \$15.8 billion in 2024 to \$11.0 billion in 2025, a decline of about \$4.8 billion. This drop was mainly due to the \$9.4 billion EV asset impairment charge and lower earnings from Ford Blue and Ford Pro segments. Even though cash taxes improved significantly from a \$1.3 billion expense in 2024 to a \$3.7 billion benefit in 2025 (which actually helped cash flow), it wasn't enough to offset the big drop in EBITDA. Maintenance capex also increased slightly from \$8.7 billion to \$8.8 billion, putting a little more pressure on cash flow. Interest expense also went up from \$1.1 billion to \$1.3 billion, which increased the debt service burden. Overall, the lower EBITDA and higher interest expense outweighed the tax benefit, resulting in the coverage ratio dropping by 0.5x.

Capital Structure & Debt Maturity Profile

Company X Capital Structure

Strengths

Strength 1: Ford is one of the most recognizable automotive brands in the world, with over 120 years in business. The company has built a loyal customer base, particularly in the United States, where the F-Series has been the best-selling truck for decades. This brand loyalty gives Ford a competitive advantage and helps sustain sales even during economic downturns.

Strength 2: Ford generates over 67% of its revenue from the United States, making it a domestic market leader. The company has the largest manufacturing footprint among U.S. automakers, and this domestic focus gives Ford a significant advantage in the current tariff environment compared to competitors who rely more heavily on imports.

Strength 3: Ford Pro is a major strength for the company, generating \$66.3 billion in revenue and \$6.8 billion in EBIT in 2025. The commercial vehicle segment is highly profitable and provides recurring revenue through software subscriptions and physical services.

Strength 4: Despite the challenges in their EV segment and the massive impairment charges taken in 2025, Ford's total revenue remained relatively stable, growing slightly from \$185 billion in 2024 to \$187 billion in 2025. This shows the resilience of their core business and their ability to maintain revenue even when one segment is struggling. Ford is a leading franchisor in the automotive industry with a great market position, and their revenue has held up well even with their EV situation.

Risks

- **Risk 1:** Even though Ford has an advantage over competitors with its large U.S. manufacturing footprint, tariffs still remain a significant risk for the company. The automotive industry is highly exposed to trade policy changes, and Ford imports a substantial portion of parts and vehicles from Mexico, Canada, and other countries. In 2025, tariffs impacted Ford's supply chain and increased costs on vehicles manufactured abroad. While Ford has more domestic production than competitors, tariffs still create uncertainty.
 - **Mitigant:** Ford received a \$1.3 billion tariff-related refund from the government in Q1 2026 related to IEEPA tariffs. The company also has a strong balance sheet with over \$42 billion in liquidity to handle tariff-related costs. Additionally, their U.S. manufacturing advantage allows them to adjust pricing and production more flexibly than competitors.
- **Risk 2:** Ford's electric vehicle segment is a major problem right now. Ford Model e continues to post significant losses, with a \$4.8 billion loss in 2025 and a \$777 million loss in Q1 2026. The company cancelled three planned EVs and ended production of the current F-150 Lightning, resulting in a \$10.7 billion impairment charge. Ford faces intense competition from Tesla and other EV manufacturers.
 - **Mitigant:** Ford is shifting their EV strategy toward more affordable products with the new Universal EV Platform launching in 2027. The company is also focusing on hybrids and extended-range EVs, which are seeing stronger demand.
- **Risk 3:** Ford and Ford Credit currently hold BBB- investment-grade ratings from S&P and Fitch, but there's a risk of being downgraded because of tariff pressures and big EV losses. Moody's still has them at Ba1, which is one notch below investment grade. A downgrade would increase borrowing costs and make it more expensive for Ford to finance operations and debt refinancing.
 - **Mitigant:** Ford has Ford Credit, which can borrow money using their finance receivables as collateral. This gives them another way to get funding beyond just the auto business. If the company gets downgraded, they still have different funding sources and a strong asset base, so they should still be able to borrow money when needed.

Recommendation

- I would invest in Ford's debt because the company has several strengths that support its ability to repay. Ford has strong brand visibility, a leading market position as a franchisor, and a dominant domestic consumer base in the US that generates over 67% of their revenue. Their segment diversification across Ford Blue, Ford Pro, Model e, and Ford Credit helps reduce reliance on any single part of the business. The debt service coverage ratio of 4.7x in 2025 is favorable, meaning Ford generates enough cash flow to cover its interest payments. Even though they have a BBB- investment-grade rating with some downside risk, Ford is still a strong brand with stable cash flows from their core

business, and Ford Credit provides asset-backed earnings. These factors make Ford's debt a reasonable investment.

Questions to Management

1. What was the main driver for canceling the EV program and then coming back to it in 2027? How much will be spent on the program improvements, and what are the expectations for Ford becoming a successful distributor of EVs from 2027 if the company canceled the program first?
2. Revenue hasn't increased much from 2024 to 2025, so why did SG&A increase slightly from \$10.3 billion to \$10.8 billion? What drove this increase in operating expenses?
3. Was the IEEPA tariff benefit a one-time event, or does the company still look forward to more refunds or benefits in future periods?
4. What are the most profitable models by revenue and by region? Which specific vehicle lines drive the most profit for Ford?
5. In the geographic breakdown, what are the "Other countries" in the 18.4% category, and which countries have the most demand out of that 18.4%?
6. Most of the board of directors are outsiders, with only 4 insiders out of 15 members. What is the reason for having such a high proportion of independent directors? Also, many of the executives were appointed after 2021 or more recently. Was this a planned leadership transition, and what was the reasoning behind these changes?
